# "<u>Requirement</u>"

We are a technology company first, but with a major focus on consumer well-being through a healthy diet. Most people are very busy with their jobs, family, and friends, and other important activities, which does not leave much time for cooking healthy food. This might lead to poor diet and lasting health consequences. We want to solve this problem by using healthy and easy approach. User can use our platform to select their diet and foods they like and dislike, and our platform will create a custom and individual weekly meal plan. But we do not stop there.

We partner with restaurant and other cooking partner to cook and deliver all meals from the generated meal plan in selected cities. All this will be packed in a monthly subscription, where user can choose between receiving one or two meals per day, every single day of the month.

## Summary

The 365-days-per-year food subscription that will make you eat healthy again. Tailored to your personal tastes and nutritional needs. We have delivered 2,50,000+ meals last year!

## **Functional Requirement**

Required project is for food delivery service. Following features are highlighted regarding functionalities of the platform.
